

NBS TELLER

NBS Teller, NBS's newest product offering, provides your tellers with powerful integration including real-time balance information, inactive and dormant account notification, stop payment and hold information. All pertinent information available on the NBS core application is provided to the teller. This package includes additional integration to NBS's signature card and ID verification

package (including ID scanning capability right from the teller station) and NBS's document imaging packing with ability to view stop payment and hold orders. NBS Teller includes additional modules such as cashier check and money order printing, TT&L receipts and bond redemption with electronic extract to automatically create miscellaneous 1099's. NBS Teller also includes other features such as deposit hold integration to NBS, accumulative cash transaction tracking for CTR and a wealth of reports including teller activity breakdown by time intervals.

NBS Teller incorporates customer relations with birthday notification and intra-bank communication with the real-time bulletin board. And NBS's excellent support is always a part of the overall package.
